An exciting new changing pad has hit the market and we wanted to give our loyal followers first dibs on something both unique and incredibly useful for those daily diaper changes. It's called the Anti-Microbial Changing Pad otherwise known as "My Changer" developed by the experienced and innovative team of Soft Gear.

So what does anti-microbial do exactly? It inhibits the growth of nasty bacteria which is something we all want to avoid especially when it comes to our babies and diaper duty. It also makes your changing pad last. I am still in shock over how quickly my old, traditional changing pad fell apart.

Designed with the modern, multi-tasking parent in mind, the American made My Changer's friendly caterpillar themed pad is no slip, non-absorbent, comfortable and soft. To clean, just wipe it down or heck, it's even dishwasher safe! I personally appreciate the fact that it is also low profile so when used in the other parts of the home, it doesn't scream giant changing pad found here! And when not in use, the My Changer can be conveniently rolled up and stored away. After all, anyone with a two-story home values the importance of having an extra changing station downstairs. This one just happens to help you keep things clean and safe for you baby!
